

## IX.3.0B-SYSTEM-UWARN SUBROUTINE UWARN

### Description

Subroutine UWARN keeps track of what pages warning messages are written and the number of lines written by the error message.

This routine should be called before the warning message is written.

The format of the warning message should begin as follows:

```
FORMAT ('+*** WARNING - ...')
```

### Calling Sequence

```
CALL UWARN (NUNIT,NLINES,NUMWRN)
```

### Argument List

<u>Argument</u>	<u>Input/ Output</u>	<u>Type</u>	<u>Dimension</u>	<u>Description</u>
NUNIT	Input	I*4	1	Unit number
NLINES	Input	I*4	1	Number of lines written
NUMWRN	Both	I*4	1	Number of times UWARN has been called <u>1</u> /

### Notes:

1/ Should be initialized to zero before calling UWARN. If -1 is passed then the number of times UWARN has been called will not be updated.
